

Toggle means to turn something on and off.

- 1 **Edit** the first button (`<button>`) tag and **add** an id attribute named **"toggle_button"**. It will look like this.

```
<button id="toggle_button">Toggle Style</button>
```

- 2 In your script code, **add** the following code. **Save** and **refresh** your browser.

```
$("#toggle_button").click(function() {  
    $(".panel").toggleClass("layout-grass");  
});
```

Fun Exercise!

You can use the functions below instead of the `toggleClass()` function.

`toggle()`
`fadeToggle()`
