

To style to your links like those above you'll need to edit the HTML files and the CSS file.

- 1 In each of your HTML files remove the one link from the menu that leads to same page. For example, in the [about-me.html](#) page you will remove the `` link, in the [books.html](#) page you will remove the `` link.

File	Menu code before editing	Menu code after editing
about-me.html	<pre> About me My Favourite Books My Family My pets </pre>	<pre> About me My Favourite Books My FamilyMy pets </pre>
books.html	<pre>My Favourite Books</pre>	<pre>My Favourite Books</pre>

Do this for all the files in your site (for example [family.html](#) and [pets.html](#)). Notice that after you make this change the menu entry is no longer clickable.
