

Now we're going to add links to all the pages we've created. This will allow us to navigate from one page to another no matter where we are in the site. Right now, the only links we have are on the Home page.

To do this we'll open up the [index.html](#) file, copy the HTML code for the links and then paste it into the other files ([about-me.html](#), [books.html](#), [family.html](#) and so on). We'll also add a link back to the Home page.

1 Open [index.html](#) in your text editor and select the HTML code for the links.

```
<p>This is my website</p>
<ul>
  <li><a href="about-me.html">About Me</a></li>
  <li><a href="books.html">My Favourite Books</a></li>
  <li><a href="family.html">My Family</a></li>
  <li><a href="pets.html">My Pets</a></li>
</ul>
```

To select the code for the links:

- Click just before the **ul** opening tag
- Keep the mouse or touchpad button pressed down and then drag down, highlighting the text as you go
- Take your finger off the button when you get to the **ul** closing tag

2 When the links are selected, check that you've included *all* of the start and end tags for the **ul** element. Spot the difference below

```
<ul>
  <li><a href="about-me.html">About Me</a></li>
  <li><a href="books.html">My Favourite Books</a></li>
  <li><a href="family.html">My Family</a></li>
  <li><a href="pets.html">My Pets</a></li>
</ul>
```

← **Oops!**

Yay! →

```
<ul>
  <li><a href="about-me.html">About Me</a></li>
  <li><a href="books.html">My Favourite Books</a></li>
  <li><a href="family.html">My Family</a></li>
  <li><a href="pets.html">My Pets</a></li>
</ul>
```

Copy the links into the Clipboard memory by pressing **CTRL** and **C**
