

# MY FIRST WEBSITE

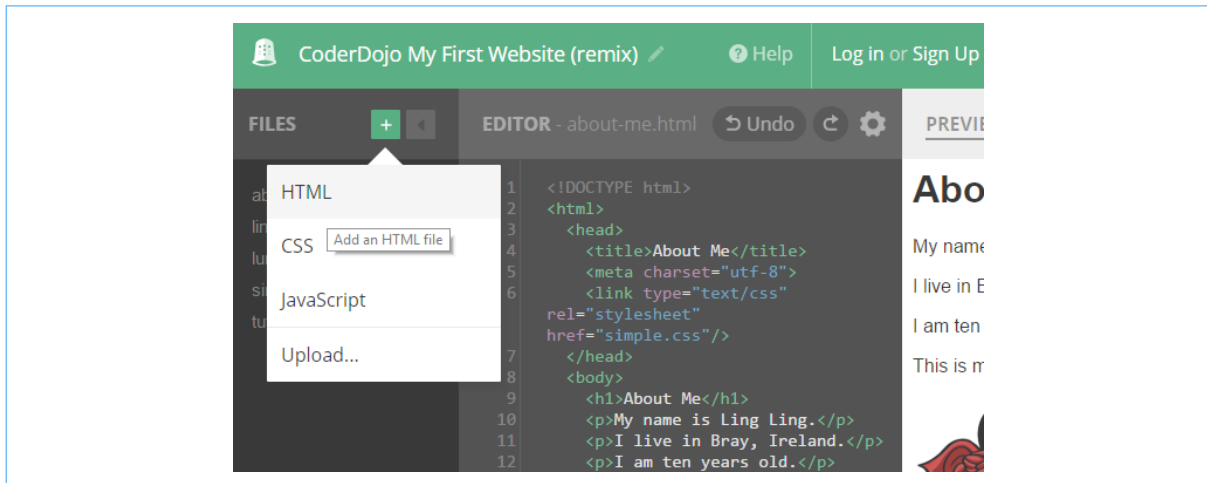

## MAKE A NEW WEB PAGE

Card 2 of 10

I'm Learning: **HTML/CSS**

- 1 Go to the **Files** pane and click on the **+** symbol. Then click on the **HTML** menu option.

- 2 In your file list, you should have a new file with a name like **index-1.html**. Click that file once to select it. Then click it again to change its name. Change the name to **books.html**
- 3 You'll need to open it and edit the text so that the page is now about your favourite books. Use the example below for ideas. Can you figure out how to download a picture (like the Harry Potter logo) for your top website and display it in the page?

Can you see that we've added a list to the page?  
The list has several **li** tags inside a **ul** element

What happens if you put the **li** elements inside an **ol** instead of a **ul** element?
