

CoderDojoTo - Web Literacy 102

Next, understand that files pass from one computer to another through the internet.

1.) Make a simple request

On a sticky write your first name and age

Address it to “www.spatula.ca”

Give it to your mentor to deliver to front of room

Wait for response

(Alt version: Give the sticky to your nearest neighbour. When they say ‘hello’ or ‘spatula’, that’s kind of like how computers talk to each other!)

2.) Lookup it up online

Go to www.google.com in your browser

Search for ‘Spatula’

Google returned you a file with search results

Q: What happens between the request and response?

A: Someone carries and delivers the messages between your computer and Google’s web server.
