BEGINNER JAVASCRIPT

JOUERY SELECTORS

Card 9 of 9
I'm Learning: Javascript

Selectors are used to allow you to select and manipulate HTML elements.

ID selectors are used to change unique elements.Class selectors are used to change multiple elements at the same time.

Inside the <body> tag, edit the tag and add an id attribute and name it as "image". Your code will look like this.

```
<img id="image" src="images/ling-ling.png" height="100"
    width="100" onclick="alert('Hello!')"/>
```

Edit the title and description paragraph () and **add** a class attribute and name both "**text**". Your code will look like this.

```
Ling Ling the Panda
He is an awesome panda.
```

Add an id attribute in the third button (<button>) tag and name it "reset_button". Your code will look like this.

<button id="reset_button">Reset</button>
