MY FIRST WEBSITE

CoderDojo
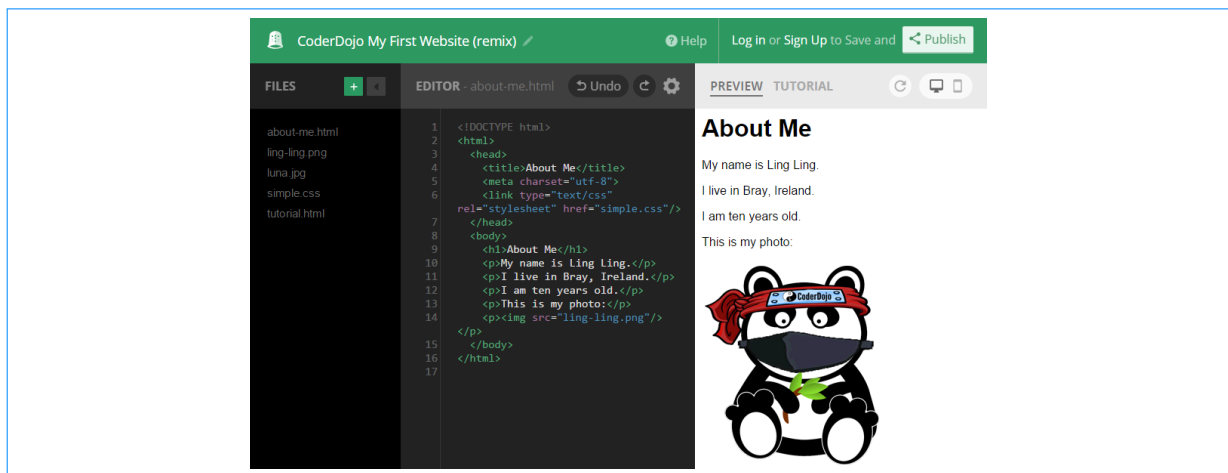

We're going to build a new web page! We're going to make ours about "Books" but you can make yours about whatever you like!

1 Visit the page https://thimble.mozilla.org/projects/1387/remix in your web browser.

Click on the **about-me.html** file on the left of the screen to edit that file.

2 If you want to save your work, be sure to sign-up for a Mozilla Thimble account.

3 Change the text in the page so that it's about you instead of Ling Ling

4 Now put in a new paragraph of text. This needs to go between the <p> and </p> tags.Like this:
<p>I am learning how to make a website at CoderDojo.</p>
<p> is the start tag for a paragraph element, </p> is the end tag.

5 Again, **save** and **refresh**.
You can see now that a web page is just text typed into a text file. How the text appears on the web page is controlled by the tags.

What happens if you use **h1** or **h2** elements instead of **p**?
What happens if you put some words inside **strong**? Like this:
<p>My name is Ling Ling</p>
