CoderDojo

7 In the XAMPP control panel, move to the **Manage Servers** tab located at the top portion. In the Manage Servers tab, press the MySQL Database and click the **Start** button. Ensure that the status of MySQL is green. **Ask** a mentor for help if it is yellow or red.

8 Open the **terminal** in your computer. Use the search function at the top right corner of your computer if you don't know where the terminal is located.

9 In the terminal, type in the command written below to open MySQL. We will be using the terminal to create databases.

sudo /Applications/XAMPP/bin/mysql

10 You will be asked to type in your computer password.
