CoderDojo
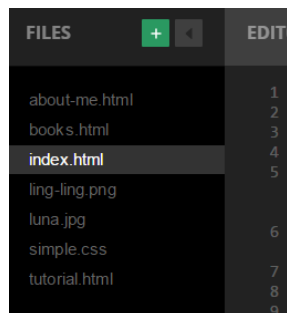

1 Create a new file called **index.html**

index.html will be the home page of your site. Home pages are often given a file name of **index.html**

See card 2 for a reminder of how to make a new file.

When you have created and renamed the file, you'll see this:

2 Edit index.html so that it's like the one in the screenshot below (except it has your name in it instead of Ling Ling):

```html
<!DOCTYPE html>
<html>
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <link type="text/css" rel="stylesheet" href="simple.css"/>
  <title>Home</title>
</head>
<body>

  <h1>Ling Ling's website</h1>

  <p>This is my website</p>
  <ul>
    <li><a href="about-me.html">About Me</a></li>
    <li><a href="books.html">My Favourite Books</a></li>
    <li><a href="family.html">My Family</a></li>
    <li><a href="pets.html">My Pets</a></li>
  </ul>

</body>
</html>
```
